

## Feeder Available Generation Capacity Table 2

**NOTE 1: Minimal Impact Capacity:** 15% or less of feeder rated capacity minus existing generation capacity minus distribution queue position capacity that is estimated to cost no more than \$250,000. The cost assumes a point of interconnection on the 12kV distribution circuit, no re-conductor of existing overhead wire or underground cable, a sectionalizing switch, no right of way issues, no environmental issues and excludes metering cost.

**NOTE 2: Total Generation Capacity:** Total generation capacity is the total circuit rated capacity minus existing generation capacity minus distribution queue position capacity. Upgrade cost that exceeds the minimal impact capacity will have to be calculated separately based on generation size and point of interconnection. A zero total generation capacity indicates no capacity is available on the feeder due to existing generation on the feeder and/or the queue position has potential capacity planned for interconnection on the feeder.

**Table 2**

Sub Name	Circuit	Area Served	NOTE: 1 Minimal Impact Capacity, MW	NOTE 2: Total Generation Capacity, MW
