EcoChoice® is a renewable electricity program offered by San Diego Gas & Electric® (SDG&E®) to both residential and business customers. This program is designed to provide 50%, 60%, 70%, 80%, 90% or 100% of your annual electricity consumption, depending on selections made at the time of enrollment, from local renewable generation.

In 2021, EcoChoice consisted of the following renewable resources averaged annually[1]:

Green-e Energy Certified New Renewables in the EcoChoiceProgram[2]		Generation Location
Solar	100%	Southern California (Midway Solar III[3])
Total Green-e Energy Certified New Renewables	**100%**	

1. These figures reflect the renewables that SDG&E contracted to cover 2021 EcoChoice sales.

2. New Renewables come from generation facilities that first began commercial operation within the past 15 years.

3. Midway Solar III became fully operational in September 2018 as the first renewable generation facility dedicated to the EcoChoice program. Midway Solar III is a 20MW of solar generation located in Imperial County.

For comparison, the current average mix of resources supplying SDG&E customers includes: Biomass and Bio-waste (2.1%), Solar (17.9%), Wind (11%), Natural Gas (26.2%), Large Hydroelectric (1.7%), Nuclear (0.2%) and Unspecified (40.9%). This resource mix was reported in SDG&E's 2020 Power Content Label. Renewables contained in SDG&E's default resource mix are not Green-e® Energy certified.

The average residential customer served by SDG&E used about 400 kWh per month. Source: SDG&E, 2020
