

EcoChoice® is a renewable electricity program offered by San Diego Gas & Electric® (SDG&E®) to both residential and business customers. This program is designed to provide 50%, 60%, 70%, 80%, 90% or 100% of your annual electricity consumption, depending on selections made at the time of enrollment, from local renewable generation.

In 2021, EcoChoice will consist of the following renewable resources averaged annually¹:

Green-e Energy Certified New Renewables in the EcoChoiceProgram ²		Generation Location
Solar	100%	Southern California (Midway Solar III ³ and Interim Pool ⁴)
Total Green-e Energy Certified New Renewables	100%	

1. These figures reflect the renewables that SDG&E has contracted to provide. Actual figures may vary according to resource availability. SDG&E will annually report to you the actual resource mix of the electricity you purchased during the preceding year before August 1 in the form of a Historic Product Content Label.

2. New Renewables come from generation facilities that first began commercial operation within the past 15 years.

3. Midway Solar III became fully operational in September 2018 as the first renewable generation facility dedicated to the EcoChoice program. Midway Solar III is a 20MW of solar generation located in Imperial County.

4. The Interim Pool is a mix of existing solar resources temporarily being used to provide renewable energy to excess program demand, which is not yet fully covered by EcoChoice dedicated generation facilities. The Interim Pool consists of solar generation located in San Diego County (five facilities, 20.8 MW), Imperial County (two facilities, 40 MW), Kern County (one facility, 20 MW), and San Bernardino County (one facility, 18.5 MW). All nine Interim Pool facilities began operation January 2013 or later.

For comparison, the current average mix of resources supplying SDG&E customers includes: Biomass and Bio-waste (2%), Solar (17%), Wind (13%), Natural Gas (24%), and Other (44%). This resource mix was reported in SDG&E's 2019 Power Content Label. Renewables contained in SDG&E's default resource mix are not Green-e Energy certified.

The average residential customer served by SDG&E uses 420 kWh per month. Source: SDG&E, 2020.

Wister Solar is a 20MW solar generation project that been contracted as a dedicated EcoChoice facility. It was expected to become operational in Q3 2020, but the current estimated operational date has been updated to Q1 2022.
