1 **PREPARED DIRECT TESTIMONY**

2 **OF DAVID M. BISI**

3 **I. PURPOSE**

4 The purpose of my direct testimony on behalf of Southern California Gas Company
5 (SoCalGas) and San Diego Gas & Electric Company (SDG&E) is to describe the local service
6 zones that SoCalGas and SDG&E propose to use in their curtailment procedures, explain why
7 capacity open seasons will no longer be necessary, and explain the impact of SoCalGas and
8 SDG&E's proposal on capacity planning.

9 **II. THE SOCALGAS/SDG&E GAS TRANSMISSION SYSTEM**

10 SoCalGas and SDG&E own and operate an integrated gas transmission system consisting
11 of pipeline and storage facilities. With their network of transmission pipelines and four
12 interconnected storage fields, SoCalGas and SDG&E deliver natural gas to over six million
13 residential and business customers.

14 A map of the SoCalGas transmission system is included below as Figure 1. The
15 transmission system extends from the Colorado River on the eastern end of SoCalGas'
16 approximately 20,000 square mile service territory, to the Pacific Coast on the western end; from
17 Tulare County and San Louis Obispo County in the north, to the U.S./Mexico border in the south
18 (excluding parts of Orange County and San Diego County).

19 The SoCalGas transmission system was initially designed to receive and redeliver gas
20 from the east, to the load centers in the Los Angeles basin, Imperial Valley, San Joaquin Valley,
21 north coastal areas, and San Diego County. As our customers sought to access new supply
22 sources in Canada and the Rocky Mountain region, we modified our system to concurrently
23 accept deliveries from the north. As a result, the system today can accept up to 3,875 million

1 cubic feet per day (MMcfd) of interstate and local California supplies on a firm basis. Primary
2 supply sources are the southwestern United States, the Rocky Mountain region, and Canada.
3 The interstate pipelines that supply the SoCalGas transmission system are El Paso Natural Gas
4 Company (El Paso), North Baja Pipeline (North Baja), Transwestern Pipeline Company
5 (Transwestern), Kern River Gas Transmission Company (Kern River), Mojave Pipeline
6 Company (Mojave), Questar Southern Trails Pipeline Company (Southern Trails), and Gas
7 Transmission Northwest (GTN) via the intrastate system of Pacific Gas and Electric Company
8 (PG&E). The SoCalGas transmission system interconnects with El Paso at the Colorado River
9 near Needles and Blythe, California, with North Baja near Blythe, California, and with
10 Transwestern and Southern Trails near Needles, California. SoCalGas also interconnects with
11 the common Kern/Mojave pipeline at Wheeler Ridge in the San Joaquin Valley and at Kramer
12 Junction in the high desert. At Kern River Station in the San Joaquin Valley, SoCalGas
13 maintains a major interconnect with the PG&E intrastate pipeline system, and receives
14 PG&E/GTN deliveries at that location. SoCalGas operates four storage fields that interconnect
15 with its transmission system. These storage fields – Aliso Canyon, Honor Rancho, La Goleta,
16 and Playa del Rey – are located near the primary load centers of the SoCalGas system. Together
17 they have a combined inventory capacity of 137.1 billion cubic feet (Bcf), a combined firm
18 injection capacity of 850 MMcfd, and a combined firm withdrawal capacity of 3,195 MMcfd.

1 A schematic of the SDG&E gas transmission system is shown in Figure 2. The SDG&E
2 gas transmission system consists primarily of two high-pressure large diameter pipelines that
3 extend south from Rainbow Station, located at the Riverside/San Diego County border. Both
4 pipelines terminate at the San Diego metropolitan area.

5 The pipelines are interconnected approximately at their midpoint and again near their
6 southern terminus. The northern cross-tie runs between Carlsbad and Escondido, with the
7 southern cross-tie running through Miramar.

8 A large diameter pipeline extends from the cross-tie at Miramar to Santee. At Santee,
9 another large diameter pipeline extends to the Otay Mesa metering station at the U.S./Mexico
10 border. At Otay Mesa, the SDG&E system interconnects with the Transportadora de Gas
11 Natural de Baja, California, S.de R.L. de C.V. (TGN) pipeline, providing another receipt point
12 for supplies into the SoCalGas/SDG&E system.

13 A small diameter, lower pressure pipeline owned by SoCalGas also extends south from
14 Orange County down to San Diego.

15 Two compressor stations are also a part of the SDG&E gas transmission system.
16 SDG&E's Moreno compressor station, located in Moreno Valley, boosts pressure into the
17 SoCalGas transmission lines serving Rainbow Station. A much smaller compressor station is
18 located at Rainbow Station.

19 SDG&E has no storage fields in its service territory.

FIGURE 2

1 **III. LOCAL SERVICE ZONES**

2 In order to more precisely define an area subject to a curtailment order per the SoCalGas
3 and SDG&E proposal, the SoCalGas/SDG&E transmission system has been divided into ten
4 distinct local service zones. These local service zones, shown in Figure 3 on page 8, reflect
5 regions used in SoCalGas and SDG&E’s operations and planning, and can all be considered
6 “subsystems” of the larger transmission system. A detailed, tariff-level local service zone map
7 and descriptions of the local service zones are included as Attachment A to this testimony. If
8 approved, the map along with the accompanying descriptions of the local service zones will be
9 added to the SoCalGas Tariff Map book. Should operational considerations such as customer
10 demand patterns or gas transmission system changes warrant either a modification to the zone
11 boundaries, the combination of zones, or the creation of new zones, SoCalGas will submit the
12 changes to the tariff map and zone descriptions by Tier 2 Advice Letter.

13 Because the local service zones are geographically distinct, customer meters will belong
14 to only one local service zone that matches the physical reality of the customer facility, and will
15 only be subject to a curtailment order called specifically for that zone. For example, a customer
16 in the “Southern System – East of Moreno” zone will not be subject to a curtailment order called
17 in the “Southern System – South of Moreno” zone, even though the transmission facilities in the
18 “Southern System – East of Moreno” zone supply the “Southern System – South of Moreno”
19 zone. A curtailment of customer service in the “Southern System – East of Moreno” zone will
20 not help in a situation where customer demand is exceeding the capacity of the pipeline network
21 in the “Southern System – South of Moreno” zone – customer demand in the “Southern System –
22 South of Moreno” zone must be reduced.

1 Operational conditions may require simultaneous curtailment of service in more than one
2 zone. In addition, capacity issues in one local service zone may impact customer service in
3 another local service zone. For example, a curtailment of customer service in the “Southern
4 System – South of Moreno” zone may result in the dispatch of additional electric generation
5 demand in the “South LA Basin” local service zone and impact our ability to maintain system
6 integrity, thereby potentially requiring a curtailment in the “South LA Basin” zone as well.

1 **IV. CAPACITY OPEN SEASONS WILL NO LONGER BE NECESSARY**

2 Pursuant to Commission Decision (D.) 02-11-073 and D.06-09-039, SoCalGas and
3 SDG&E currently conduct capacity open seasons in the San Joaquin Valley and in the Rainbow
4 Corridor/San Diego areas. The purpose of the capacity open seasons is to allocate the available
5 capacity to customers seeking firm noncore transmission service. Those noncore customers that
6 desire firm transmission service submit their hourly bid requests during the open season and are
7 subject to an annual use-or-pay requirement for any capacity awarded; those that do not bid
8 receive interruptible service. SoCalGas and SDG&E propose to end these capacity open
9 seasons. The open seasons of the past have failed to produce appropriate capacity planning
10 signals in these potentially constrained areas. Customers freely elect interruptible service yet
11 have complained when SoCalGas and SDG&E have needed to curtail interruptible service.¹
12 SoCalGas and SDG&E's forecasts of noncore usage have so diverged from customers' firm
13 service elections in the capacity-constrained areas that planning sufficient capacity for these
14 areas has become problematic. As discussed below, there are other factors, including CPUC-
15 mandated peak day design criteria, which will continue to drive capacity planning practices in
16 the absence of these open seasons.

17 Ms. Marelli proposes in her direct testimony that SoCalGas and SDG&E no longer
18 differentiate between firm and interruptible noncore service, replacing those two services with
19 one single level of noncore transmission service. As a result, there is no longer any need to
20 allocate firm noncore service and therefore no need to conduct capacity open seasons. Noncore
21 customers will simply be curtailed to the available system capacity.

¹ For example, customer protests to SoCalGas Advice Letter 4441, in which SoCalGas initiated a localized curtailment of interruptible noncore customers in the northern San Joaquin Valley system.

1 **V. EFFECT ON CAPACITY PLANNING**

2 The proposals in this this application should have no effect on the capacity planning
3 practices of the utilities. SoCalGas and SDG&E will still plan and design their gas transmission
4 system to meet the CPUC-mandated 1-in-35 year peak day design standard for core service and
5 1-in-10 year cold day design standard for noncore service. Note that the 1-in-10 year cold day
6 design standard approved by the CPUC is actually a design standard for *firm* noncore service.
7 However, when performing long-term system planning, SoCalGas and SDG&E apply the 1-in-
8 10 year cold day design standard to the forecast *total* noncore demand. SoCalGas and SDG&E
9 cannot reasonably forecast firm noncore demand in the long term, as that would require us to be
10 able to forecast which customers would be willing to sign contracts for firm service, and to also
11 forecast the amount of each capacity commitment.

12 SoCalGas and SDG&E will still propose facility improvements when forecast demand
13 under these design standards exceeds available capacity. Such proposals could be made in a
14 General Rate Case proceeding, or in a separate application. SoCalGas and SDG&E will also
15 propose facility improvements if noncore customer curtailment in a particular zone becomes
16 frequent. SoCalGas and SDG&E have not made any determination on what level of curtailment
17 frequency would trigger a proposal for facility improvement in a particular zone, and would look
18 towards the impacted customers to help define that frequency and support facility improvement
19 before the Commission.

20 This concludes my prepared direct testimony.

1 **VI. QUALIFICATIONS**

2 My name is David M. Bisi. I am employed by SoCalGas as the Gas Transmission
3 Planning Department Manager. My business address is 555 West Fifth Street, Los Angeles,
4 California, 90013-1011.

5 I received a Bachelor of Science degree in Mechanical Engineering from the University
6 of California at Irvine in 1989. I have been employed by SoCalGas since 1989, and have held
7 positions within the Engineering, Customer Services, and Gas Transmission departments.

8 I have held my current position since April, 2002. My current responsibilities include the
9 management of the Gas Transmission Planning Department responsible for the design and
10 planning of SoCalGas and SDG&E's gas transmission and storage systems. As such, I am
11 responsible for: planning the transmission system to meet the CPUC-mandated design standards
12 for core and noncore firm service over a 25 year forecast period; recommending improvements
13 and additions as necessary; monitoring the changing dynamics of the gas transmission system as
14 new load centers develop and new supply receipt points are created; alerting management when
15 operating precautions or changes become necessary; performing short-term capacity analyses for
16 customer service requests from the transmission system; evaluating system impacts from storage
17 expansion projects and new product offerings to customers; and developing staff to maintain
18 continuity and consistency in system planning.

19 I have previously testified before the Commission.
