\*The 20-year forecast of credits and charges shown here are based on a methodology ordered by the California Public Utilities Commission (CPUC) for use by the state's electric investor-owned utilities. Given the prescriptive nature of this methodology, SDG&E cautions users not to rely on this forecast as a predictor of future GT and ECR rates, which are expected to differ from what is provided in this forecast. The forecasts are provided to illustrate potential future changes to the credits and charges to help you evaluate the impact of your potential participation in the GTSR program. As the CPUC acknowledged in Decision 16-05-006, an estimate of GTSR credits and charges for 20 years (or even 5 or 10 years) is challenging and unlikely to be accurate. Moreover, the 20-year forecasts shown here are not necessarily representative of SDG&E-specific forecasts of rate components. SDG&E can neither predict nor guarantee any actual cost savings or increases due to changes to these credits and charges, and such changes will affect actual costs. Please contact SDG&E for more information about this forecast. If you have a SDG&E account representative, please contact them for more information about this forecast and your available rate options.
