

Year round savings: Technology Incentives Program

Program highlights

- Incentives for the purchase and installation of qualified automated demand response measures.
- Any commercial, industrial or agricultural customer whose facilities have a monthly on-peak demand of 20kW or greater can apply.

The Technology Incentives Program rewards nonresidential customers for the installation of equipment and controls that provide year-round energy management.

Benefits for you and your business

The Technology Incentives Program offers up to \$200 per kilowatt (\$200/kW) of approved, installed and verified load reduction or 75% of the total cost of installing enabling devices; whichever is less for Automated Demand Response (Auto-DR) measures.

Who is eligible to participate?

Any commercial, industrial or agricultural customer with a monthly on-peak demand of 20kW or greater at the facilities for which the incentives are being requested can participate.

Customers able to install Auto-DR measures that meet open Auto-DR Standards will be considered eligible for incentives under this program.

How does the program work?

When an Event Day is called, the system automatically implements the preprogrammed temporary load reduction plan established, which will give you peace of mind and help maximize your savings potential.
