Urban Substation Rebuild Project

Our commitment to providing safe and reliable energy means making improvements to our system, which includes rebuilding and upgrading the existing Urban Substation. This project will replace aging electric service equipment and improve the safety and reliability of electric transmission and distribution systems for the downtown San Diego area.

This graphic serves as an illustration to depict the anticipated appearance of the finished substation

Overview

As our region expands, our demand for energy also grows. Given the load growth over the past decade in the downtown San Diego area, increased demand for energy requires equipment to meet current engineering standards and improve reliability to serve residents and businesses in downtown San Diego.

Project benefits

- Improved reliability of the electric transmission and distribution systems
- Enhanced safety by upgrading the existing 1980s aging infrastructure
- Updated equipment to meet current engineering standards
- Helps prevent unplanned outages in SDG&E's service territory

About the Project

The Urban Substation is in the East Village area within downtown San Diego. The upgrades will take place on existing SDG&E property located between F Street, G Street, 14th Street and 15th Street. The project will upgrade SDG&E's existing 69/12kV Urban Substation to better meet current engineering standards and improve reliability. The project also includes upgrades to existing overhead transmission lines and underground distribution lines that extend beyond the Urban Substation site.

Project schedule

Construction: Overall project began Third Quarter 2023

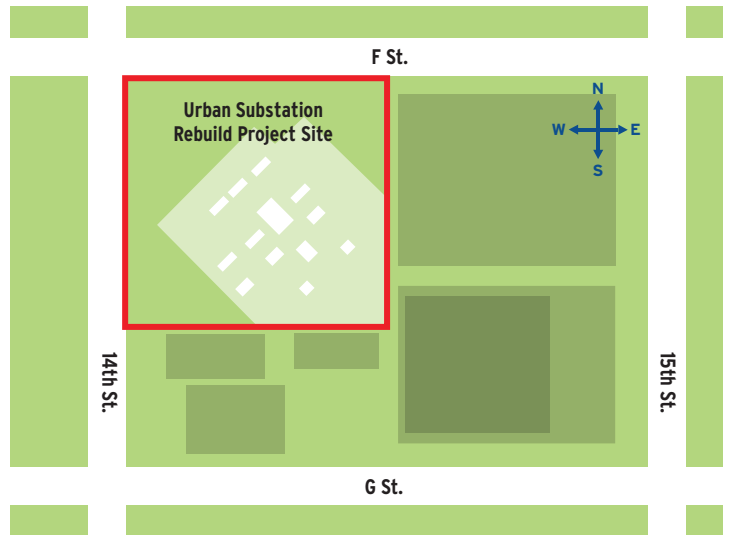

In-Service Date: Approximately Fourth Quarter 2026

What to expect

We anticipate the project will be completed in mid-late 2026. During this time, we'll work as safely and quickly as possible and make every effort to minimize disruptions, such as construction traffic, dust and noise along the nearby perimeter streets. SDG&E has worked closely with the City of San Diego and its Civic San Diego team to coordinate this project with the East Village Green Park Project. Although not anticipated, our work may require us to shut off the power for safety reasons. If so, we'll contact you in advance to help make sure you're prepared for a planned outage.
