RESPONSE 3:

- a. Accounting controls over regulatory accounts generally consist of the following:
 - 1. Appropriate individuals review Regulatory Reporting's balancing account journal entries and supporting schedules for missing, inaccurate and inappropriate amounts to check that revenue and expense are recorded in compliance with established regulatory decisions. Activity in accounts is reviewed for completeness, validity, cutoff, and accuracy.
 - 2. Regulatory Reporting prepares the Regulatory Account Detail Report and distributes to the Program Managers on a quarterly basis for validation of activity balanced in the account. Positive confirmations are required, and any discrepancies are investigated and resolved accordingly.
 - 3. Regulatory Accounting, in conjunction with the IT Department, monitor that backup versions of electronic files are being maintained.
 - 4. Changes to spreadsheets are properly labeled within an appropriate taxonomy for proper usage and version control.
 - 5. Proper input controls are in place to reduce and or prevent input errors in critical spreadsheets.
 - 6. Spreadsheets are properly protected from unauthorized access.
 - 7. Regulatory accounts are supported by Preliminary Statements.
